Create GitHub App

GitHub App name *

The name of your GitHub App.

Write | Preview — Markdown supported

This is displayed to users of your GitHub App

Homepage URL *

The full URL to your GitHub App's website.

Identifying and authorizing users

Add redirect URI

The URIs to redirect to after a user authorizes your application. You may add up to 10 redirect URIs. Wildcard matching allows tokens to be sent to all subdomains and additional paths of the redirect URI. Only enable this if you are sure you have control over all possible matches. Learn more about secure use of redirect URIs.

Redirect URI

e.g. https://example.com/auth — Delete

- [ ] **Allow wildcard matching**
- [x] **Expire user authorization tokens**

This will provide a `refresh_token` which can be used to request an updated access token when this access token expires.

- [ ] **Request user authorization (OAuth) during installation**

Requests that the installing user grants access to their identity during installation of your App.

- [ ] **Enable Device Flow**

Allow this GitHub App to authorize users via the device flow.

Post installation

Setup URL (optional)

Users will be redirected to this URL after installing your GitHub App to complete additional setup.

- [ ] **Redirect on update**

Redirect users to the 'Setup URL' after installations are updated (E.g. repositories added/removed).

Webhook

- [ ] **Active**

We will deliver event details when this hook is triggered.

Webhook URL *

Events will POST to this URL with a webhook.

Secret

Set a secret to secure your webhooks.

Permissions

These user permissions are granted on an individual user basis as part of the user authorization flow.

Repository permissions
Repository permissions permit access to repositories and related resources.

Organization permissions
Organization permissions permit access to organization related resources.

Account permissions
These permissions are granted on an individual user basis as part of the User authorization flow.

Enterprise permissions Preview
Enterprise permissions permit access to enterprise account resources.

Subscribe to events

Based on the permissions you've selected, what events would you like to subscribe to?

- [ ] **Installation target**
  A GitHub App installation target is renamed.
- [ ] **Meta**
  When this App is deleted and the associated hook is removed.
- [ ] **Security advisory**
  Security advisory published, updated, or withdrawn.

Where can this GitHub App be installed?

- (•) **Only on this account**
  Only allow this GitHub App to be installed on the @iamtheoracle account.
- ( ) **Any account**
  Allow this GitHub App to be installed by any user or organization.
